About ICS Input Technology:

Intensive Coloring System (ICS) Input Monitors provide the richest color compatibility with CCTV equipment and enhanced video performance. Unlike many flat panel monitors designed for the PC industry, ICS enabled monitors will not experience dropped signals as a result of video signal hunting. Dropped signals and poor composite video quality have made most flat panel monitors (designed for PC industry) difficult and undesirable to use with multiplexers and digital recorders. DRW monitors are designed for video applications and are the most compatible in the industry.
