#### About HDGA Input Technology:

High Definition Graphic Array (HDGA) Input Monitors provide the highest compatibility with CCTV equipment and enhanced video clarity. Unlike many flat panel monitors designed for PC industry, HDGA enabled monitors will not experience dropped signals as a result of video signal hunting. Dropped signals and poor composite video quality have made most flat panel monitors (designed for the PC industry) difficult and undesirable to use with multiplexers and digital recorders. DRW monitors are designed for video applications and are the most compatible in the industry.
